

FORMULATION OF ENCAPSULATED AVACADO OIL BEADS FOR BODY WASH

Encapsulation is the physical-chemical technique or process by which a active ingredient is protected and surrounded by a polymeric wall made up of Lactose ,Mannitol, Microcrystalline cellulose and Hydroxy propylmethyl cellulose(HPMC) that isolates it from its environment. Sprayspheres SC® beads are specially used for encapsulation that specifically deals with the incorporation of commercially available active material into protective system that can deliver the active to specific site.(e.g. conversion of liquid active agents or essential oils into beads. Natural and biodegradable lactose and cellulose based colored beads infused with Avacado Oil via encapsulation.

Encapsulated Avacado oil beads/spheres break down upon rubbing without leaving a residue. Easily dispersed, delivering the active ingredient. Improved stability in final products during processing (e.g. less evaporation of volative active Creation of visible effects.

Encapsulation Technology deals with these Adjustable properties (actives,particle size, structure, oil etc)

Encapsulated Avacado oil in bodywash naturally contains Vitamin E, potassium, lecithin, and omega fatty acids nourishes and delivers the nutrients deep into the skin and moisturises it .

Also Vitamin D and Beta Carotene in Avacado oil hydrates skin without any oily residue. Calms Dry flaky skin.

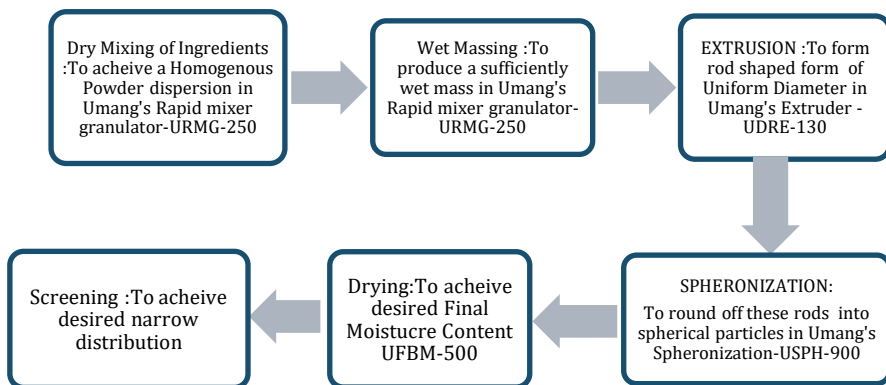

Filled with fatty acids, carotenoids, vitamins and antioxidants such as vitamin E and C, and minerals avocado oil beads/spheres has antioxidant, anti-inflammatory, and very high moisturizing properties.

Encapsulated Avacado Oil beads /spheres are available in a variety of colors.

Key Words:

Encapsulated Beads, Spheres, Cosmetic beads, Beads for special effects, Cosmetic beads for aesthetic effect.

ENCAPSULATION PROCESS

UDRE-130 Umang Pharmatech Extruder

Encapsulated Avacado Oil beads Rupture by Chemical, Physical factors Stage of Release
ENCAPSULATION MECHANISM

How Encapsulation Works

- Body wash are generally made up of two parts: a lipophilic part, which is fat-soluble, and a hydrophilic part, which is water-soluble. Dirt itself is lipophilic, which means that it won't dissolve in water. Simply rinsing yourself with water after you've got some dirt on yourself won't get you clean. Only something with a fatty product will dissolve the dirt and lift it off your skin. The moisturizing capabilities often come from the oils and natural active ingredients that are mixed into the formula of these body washes provides a luscious lather, is travel-friendly, gives all-over hydration.
- This combination of lipophilic and hydrophilic ingredients is called a surfactant. A surfactant cleans your skin because the lipophilic part dissolves the dirt on your skin, while the hydrophilic part washes it away.
- Body wash with Encapsulated beads contains active ingredients that are coated in a polysaccharide shell—think of it as a shiny, slippery, protective coating.
- This encapsulated coating serves as a carrier system for the active ingredients in your skincare, i.e. the ingredients that are capable of transforming your skin.
- Instead of activating all at once on the surface, encapsulated coatings protect your actives and release them slowly over time. This allows it to sink to deeper layers of your skin, where you can benefit most from active ingredients.

Key Properties of Encapsulated beads

- Free of microplastics.
- Non GMO
- Perfect Spherical geometry
- Has non-toxic, non-comedogenic and non-allergenic properties
- Oxidatively stable.
- Gentle and Effective on skin.
- Rapid dispersion with excellent uniformity.
- No change in Product pH.
- Encapsulation Stabilizes actives by protecting them from environmental factors, like UV light.
- Easily dispersed by finger to provide smooth and super feeling.
- Provide visual effects and delivery actives.
- Provide Systems that can incorporate Hydrophobic or Hydrophilic actives such as Fragrance, Colour, Vitamin and Herbal Extract etc

Formulation Procedure:

Step I : Take water (72.59) ml and in this add the xanthan gum & Pvp-k30 (A mixture)

Step II : In another container take 18.84 ml water also add SLS & C.A.P.B heat at the temperature of about 75° C (B mixture)

Step III: Add (B mixture) in (A mixture) very slowly & mix well at the end add fragrance and Encapsulated Avacado Oil beads at moderate temperature and at slow stirring.

INCI Name:

Microcrystalline cellulose Hydroxy propylmethyl cellulose, Lactose, Persea gratissima (Avocado) Oil.

Formulation Tip

Ingredients	Qty(%ww)
Xanthan Gum	1.5gm
Pvp-k30	1.45gm
SLS	2.72gm
Cocomido propyl betain (C.A.P.B)	2.72gm
Fragrance	Q.s (0.18)
DI Water	91.43 ml
Avacado Oil beads	2%
