STABILITY OF ENCAPSULATED NEEM OIL IN ACTIFILMS FOR ORAL CARE USES

INTRODUCTION

These little Actifilms magically disappear upon rubbing: delivered dry, they have the amazing properties to soften in the formula making them more malleable and ready to disintegrate when pressure is applied. These exclusive shapes made for the personal care industry, are stable in many types of cosmetic and personal care products.

Neem oil comprises two major compounds named Azadirachtin and triterpenoid which gives neem oil its antiseptic, antifungal, antipyretic and antihistamine properties.

Neem tree oil, with its strong, pungent aroma, its therapeutic and medicinal value, and extremely bitter in taste is because of the presence of phytochemicals Azadirachtin and triterpenoid.

This article shows the stability of Encapsulated Tulsi oil in Actifilms.

Key words: Encapsulated films, HPMC films, Dissolving films for Topic formulations eg: (Oral Care, soap, bathbombs), Decorative Water soluble Films, Natural Actifilms, Biodegradable Films.

TECHNOLOGY

Umang Pharmatech has used the Pharmaceutical's popular technology i.e. Encapsulation and Film Casting Technology to Develop Actifims with incorporation of desirable actives in personal care formulations to obtained better Visual impact, deliver desirable actives ingredients and provide stable Films within the formulation.

Solution Preparation:

Excipients were mixed with active to acheive a Homogenous mixer.

Film Casting : The solution is then poured on Film casting machine i.e. on UCFC 600 -Solution tank + Film Casting + Automatic (Slitting & Strip Packing)

BENEFITS

- Helps in achieving the ideal end user product experience.
- Disappear on gentle rubbing without leaving any residue on teeth / oral case use upon application.
- Adds visual effects to your product to make it attract customers with four attraction senses.
- Nature friendly as soluble in water.
- Encapsulates actives.
- Various customized shapes possible.

STABILITY STUDIES:

- Due to the inert ingredients used for manufacturing, the spheres are very stable at temperatures up to 25°C.
- Encapsulated Neem oil in Actifilms were prepared by using Umang's Film Casting technology and kept for stability studies at a temperature $25^{\circ}\text{C} \pm 2^{\circ}\text{C}/60\pm 5$ RH for 6 months and analyzed the changes occur during the testing period.

> Solubility Test:

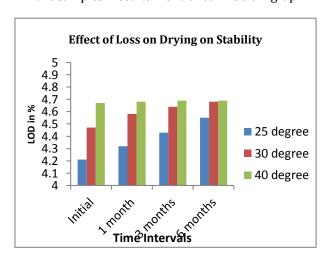

The sampling was done at fixed time intervals and analyzed in purified water and checked visually

TIME INTERVALS	VISUAL RESULTS
Initial	Soluble
After 1 month	Soluble
After 3 months	Soluble
After 6 months	Soluble

> Temperature Effect on LOD Stability:

The incubated Encapsulated Neem Oil in Actifilms were place in an air tight glass bottles at 25° C, 30° C and 40° C ± 2° C for 3 hours.

The sampling and analysis was done at fixed time intervals for their LOD, to check the moisture loss in the samples. Results mentioned in below graph.

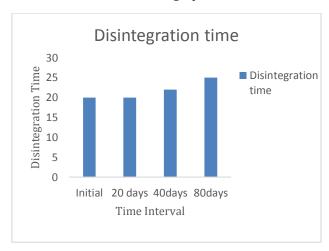

Disintegration Time:

The incubated Encapsulated Neem oil in Actifilms were place in $25^{\circ}\text{C} \pm 2^{\circ}\text{C}/60\pm 5$ RH for 6 months and analyzed the changes occur during the testing period.

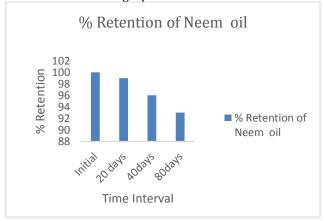

The sampling and analysis was done at fixed time intervals for their Disintegration time,

Results mentioned in below graph.

> % Active Content retention:

The stability of Encapsulated Neem oil in Actifilms was compared to that with the initial amount present in Actifilms. After 80 days at 42°C, HPLC analysis revealed that the encapsulation technology facilitated retention of 93% of the Neem oil of initial record. Results mentioned in below graph.

CONCLUSIONS:

The above studies show that Encapsulated Neem Oil in Actifilms do not change the appearance when analyzed for Solubility, LOD and Disintegration time as testing parameters and analyzed the desirable retention throughout the stability studies. Thus, make it an ideal for use in cosmetic formulation.
