

STABILITY OF BAMBOO EXFOLIATORS FOR PERSONAL CARE USES

INTRODUCTION

Exfoliation is the process of removing dead skin cells from the surface of your skin using a chemical, granular substance, or exfoliation tool.

Cosmetic exfoliation may be accomplished by chemical or mechanical means. Chemical exfoliation methods include acids, non-acid peels, enzymes, or other agents. Mechanical exfoliation may be accomplished using a device or small particles of various types. Both chemical and mechanical exfoliation may be performed as an in-office procedure or at home, depending on the type and strength of treatments desired.

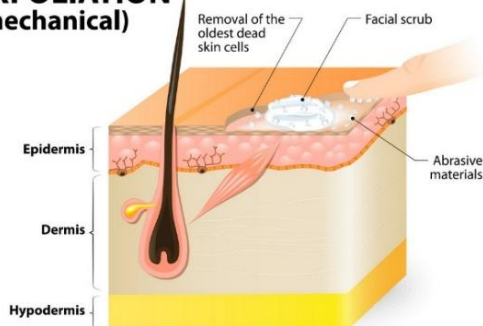

Bamboo is one of the agricultural crops which can be exploited for the design and development of polymer composites. Bamboo Exfoliators is rich in natural silica which improves skin health by helping it absorb essential minerals such as more than 75% silica, calcium, potassium, iron, choline, magnesium and betaine. Bamboo Exfoliators is used in Phytotherapy for its remineralizing properties.

This article shows the Stability of Bamboo Exfoliator.

Key words: Exfoliators beads, Scrub beads, Natural Exfoliators, Cosmetic beads for aesthetic effects, Peel off, flake off, throw out, shed off, scrap, eliminate, rub.

MECHANISM OF EXFOLIATION PROCESS

EXFOLIATION (mechanical)

Exfoliation occurs naturally as outworn stratum corneum cells detach and are removed from the skin's surface. Replacement of stratum corneum cells occurs by a self-renewal process as epidermal cells move upward from the basal layer, the stratum basalis, and through the subsequent two layers, the stratum spinosum and stratum granulosum, to reach the stratum corneum. This process requires about four weeks, although it can be prolonged in aging and other skin conditions. Normal desquamation occurs invisibly as single corneocytes, or very small aggregates of them, detach from the skin's surface and are shed.

BENEFITS OF BAMBOO EXFOLIATORS

- Reduce Dead skin cells.
- Reduces Dullness to A Great Extent.
- Softens and exfoliates skin.
- Works Best in Removing Blackheads.
- Takes Care of Tanned Skin Really Well.
- It reduces the appearance of cellulite.
- Allows for better absorption of moisturizers and serums.
- Stimulates blood flow

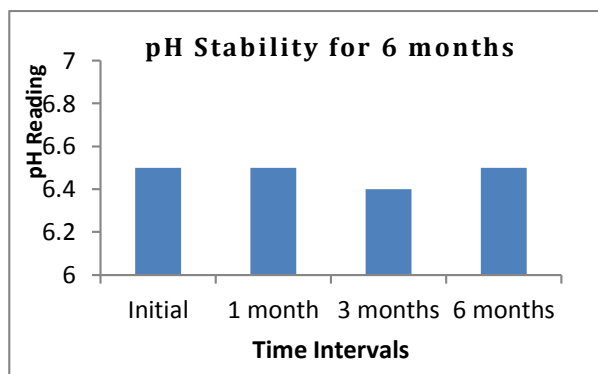

STABILITY STUDIES:

- Due to the inert ingredients used for manufacturing, the spheres are very stable at temperatures up to 25°C.
- It can withstand the pH range of 5 to 8 except blue color.
- Bamboo Exfoliators were prepared by using Umang's Extrusion-Spheronization technology and kept for stability studies at a temperature 25°C ± 2°C/ 60± 5 RH for 6 months and analyzed the changes occur during the testing period.

➤ pH Stability:

The sampling was done at fixed time intervals and analyzed in different pH solutions ranging from pH 6 to 8 and checked on pH meter for their pH. Results mentioned in below graph.

➤ Leach Test -

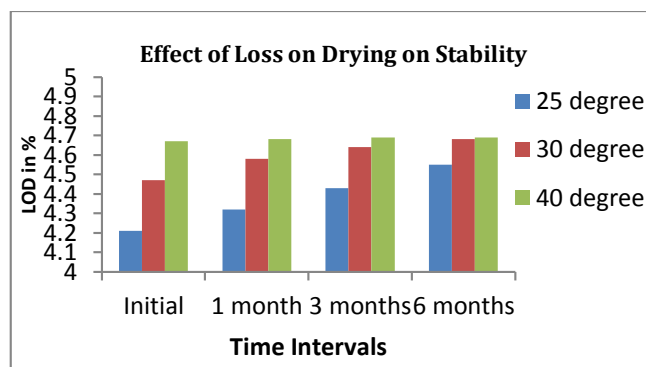

The sampling was done at fixed time intervals and then placed in three different pH solutions and checked visually for any color leaching. Results mentioned in below table.

TIME INTERVALS	VISUAL RESULTS
Initial	No change in color
After 1 month	No change in color
After 3 months	No change in color
After 6 months	No change in color

➤ Temperature Effect on LOD Stability:

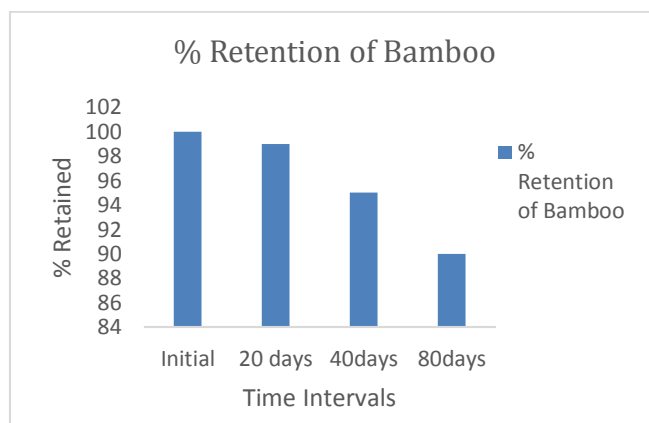

The incubated Bamboo Exfoliators were placed in an air tight glass bottles at 25°C, 30°C and 40°C ± 2°C for 3 hours.

The sampling and analysis was done at fixed time intervals for their LOD, to check the moisture loss in the samples. Results mentioned in below graph.

➤ % Active Content retention:

The stability of Bamboo Exfoliators was compared to that with the initial amount present in Spray spheres® -SC beads. After 80 days at 42°C, HPLC analysis revealed that the encapsulation technology facilitated retention of 90% of the bamboo of initial record. Results mentioned in below graph.

CONCLUSIONS:

The above studies show that Bamboo Exfoliators do not change the appearance when analyzed for different pH, Leach test and Temperature as testing parameters and demonstrated the desirable retention throughout the stability studies.

Thus, make it an ideal for use in Personal care formulation.
